

Project 3: Mobile Learning App

The **Mobile Learning App** is an educational platform designed to provide students with easy access to study materials, quizzes, and interactive lessons on their smartphones. The app supports offline learning, allowing users to download content and study without an internet connection, making education more accessible.

Developed using **Flutter** for cross-platform compatibility and **Firestore** for backend storage, the app includes features such as progress tracking, flashcards, and video lectures. A gamified learning experience with badges and rewards keeps students motivated and engaged.

The goal of this project is to make learning flexible, interactive, and convenient. By leveraging mobile technology, the app helps students study anytime, anywhere, improving knowledge retention and academic performance.
